

>edpos

The versatile, easy-to-use point of sale software package for retailers.

edpos

from **Eurodata International** is truly versatile. It is international, multilingual, touch-screen compatible with multiple sales modes and suited for any Windows PC or electronic till.

edpos is fully functional across sales and payments, POS management and sales register. It integrates in real time with back office systems and is a highly effective front end to the **Eurodata Retail Management Suite**, our end-to-end retail management and accounting solution.

From over 40 years of listening to our retail customers, **edpos** is reliable, easy to install and use, and fully compliant with the latest local and national regulations. Designed and supported by one of Europe's leading retail software specialists, Eurodata edpos is fast and flexible information at your fingertips.

Easy to use. We know how important it is for your cashiers to quickly understand your POS system, so we have designed **edpos** to be totally intuitive. We have developed an interface that is not only quick and easy but a pleasure to use.

Versatile. We meet the needs of many different retail customers, large and small. Smaller customers can run both **edpos** and our back office system **edbos**, on the same PC, switching between the two with a single click. Cashiers can choose their language, operate with touch-screen or key board, and register sales by bar code, short code, mnemonic or pre-programmed key.

They choose.

Fully functional. Through our specialist knowledge of the retail industry, we have evolved a comprehensive range of functions that meets every retail need, including a valuable searchable register of all transactions.

Well supported. We quickly tackle any difficulties through our telephone assistance service. This features remote maintenance and is tailored to meet individual customer needs.

>edpos

Sales functions. Itemised sales can be registered by any method:

- bar code reading using any laser scanner
- entering a PLU/SKU short code on a cash till, PC keyboard or touch screen
- pre-programmed keys
- typing a mnemonic

We also offer special modules for sales of fixed-price set meals and to meet the sophisticated pricing, data and customer management requirements of fast-fit vehicle service centres.

Payment functions. Cash, cheques, cards and vouchers can be managed in the same transaction. Split payments or payment for credit purchases, suspended payments and unpaid bills are all easily manageable.

Other payment functions include putting cash receipts on hold; advising balance and credit limit on a customer account; enabling payment of customer bills; and advising cashier discount limits.

edpos can handle multiple promotions and fully supports in-house and third party loyalty programmes.

Management functions.

edpos enables routine management during a typical day's trading.

- Shift management, including shift suspension
- Registering receipts and expenditures ...“cash-in & cash-out”
- Registering payment of unpaid bills or suspended payments
- Monitoring cash including cash capacity alarm
- Programming of quick access sales buttons or keys

Sales register enables users to easily access all transaction records including receipts issued, amended or cancelled, and refunds given. The register can be interrogated in many ways, including by receipt number, cashier, product code or name, and transaction value.
